

# Market **Update** Note

18 January 2023

## Time to ensure engine connectivity

### Can your newbuilding connect to online resources of MAN Energy Solutions?

At MAN Energy Solutions, we aim to provide digital tools and state-of-the-art online solutions to support operation and maintenance of MAN B&W engines. Solutions based on engine internet connectivity.

Today, electronics and software power engines from MAN Energy Solutions, and we face a near future where data and software will play a decisive role. Since 2020, all electronically-controlled MAN B&W ME two-stroke engines have been designed for internet connectivity and live data transmittance via satellite.

MAN Energy Solutions continuously develops new software solutions including automation features, data packets, and services ensuring performance upgrades, reliability, and safety – all of which depends on engine connectivity.

The key possibilities with a connected engine include:

- Access to MAN CEON, our digital platform for data-driven services
- Remote installation of new software and update of existing software
- Notifications on operation from PrimeServ Assist based on monitoring of live engine data and data processing algorithms. Today, more than 400 vessels are signed up for this service
- Access to MAN CEON and PrimeServ Assist is available free of charge for the first year of the licence warranty period. This is the preferred option for more and more vessels
- At registration the engines get a digital identity key that secures the ability to connect to future digital solutions and tools from MAN Energy Solutions.

To confirm access to all the possibilities and to MAN CEON, MAN Energy Solutions recommends testing of internet connectivity before engine delivery. An online engine is a prerequisite for benefitting from our online solutions and performance optimisations.
