Everllence launches investor process for Deggendorf site

Everllence management has initiated an investor process for its site in Deggendorf, Germany, that intends to ensure the future and sustainable development of the location.

The reactor and apparatus business based there has faced economic challenges for some time and they are having a negative impact on the plant's capacity utilization. For this reason, Everllence launched a package of measures already at the beginning of 2025, which included – among other initiatives – a reduction in manufacturing hours by some 40%, as well as the voluntary, medium-term and socially responsible reduction of around 90 jobs.

Martin Oetjen, Executive Board Member for Production at Everllence, said: "The capacity adjustments at the Deggendorf site have helped stabilize production utilization and reduce cost pressures. Nevertheless, economic challenges in relevant markets persist, especially in the Chinese market and the chemical industry. Targeted, strategic development of this business area will therefore continue to be necessary."

He added: "The Deggendorf plant possesses a unique competence profile in many respects, both in Germany and Europe, and we are convinced that this potential can be further developed under the right conditions. However, Everllence is increasingly focusing its strategic efforts on overarching growth areas. Against this backdrop, we have decided to seek an investor that will actively drive the site's strategic development and that has the prerequisites to fully leverage its existing expertise and market potential."

The company will provide information on the further progress of the investor process in due course.

About the Deggendorf site

For more than 60 years, Everllence has manufactured custom reactor-systems for chemical and petrochemical applications in Deggendorf. Furthermore, the location has extensive expertise in the development and production of reactors for the manufacture of e-fuels, such as green methanol (methanol synthesis) or synthetic methane (methanation). Following the recent structural adjustment program, Everllence employs around 360 people in Deggendorf.

Everllence (formerly MAN Energy Solutions) is a leading provider of propulsion, decarbonization and efficiency solutions for shipping, the energy economy and industry. True to our motto – 'Moving big things to zero' – we help key industries in the global economy to reduce hard-to-abate emissions. Our technologies have a measurable impact on the success of the global energy transition. Headquartered in Germany, Everllence employs some 15,000 people at over 140 sites globally. Our after-sales brand, Everllence PrimeServ, also supports our customers through its worldwide service-center network.
